👛 Tapback

Your wallet finally has something to say.

When you pay with your phone, it says something funny out loud, like *"Back at Starbucks? Third time this week!"*. It's all in good fun, and the jokes are never mean.

Setup takes about **5 minutes**. Find your phone type below and follow the numbered steps. If something doesn't match exactly, don't worry: Charles can help over the phone.

> **Which phone do I have?** If there's an apple logo on the back, it's an **iPhone** → Part 1. Otherwise (Samsung, Google Pixel, Motorola…) it's **Android** → Part 2.

Part 1 · iPhone

You need: an iPhone with your card in **Apple Wallet** (the one you use to pay by tapping), and the link Charles texted you.

Step A: Add the Tapback shortcut

1. Open the **link Charles sent** (it starts with `icloud.com/shortcuts`).
2. The **Shortcuts** app opens. Tap **Add Shortcut**.
3. To try it, open **Shortcuts** (white and pink-blue icon), find **Tapback** and tap it once. Your phone should say a joke about McDonald's. 🎉

Step B: Make it run when you pay

1. In **Shortcuts**, tap **Automation** at the bottom of the screen.
2. Tap **+** (top right) or **New Automation**.
3. Scroll down and tap **Transaction**. On newer phones it's called **Wallet**.
4. Make sure your card is **checked**. Leave everything else as it is.
5. Tap **Run Immediately**. Then turn the **Notify When Run** switch **off** (it turns grey).
6. Tap **Next**, then **New Blank Automation** (or **Create New Shortcut**).

7. Tap **Add Action**, type **Dictionary** in the search box and tap it.
8. Tap **Add new item** → **Text**. In the left box type `merchant`. Tap the right box, then tap **Shortcut Input** in the bar above the keyboard. Tap the blue **Shortcut Input** word and choose **Merchant**.
9. Do the same again: **Add new item** → **Text**, type `amount` on the left, choose **Shortcut Input** → **Amount** on the right.
10. Tap the search box at the bottom, type **Run Shortcut** and tap it. Tap the blue word **Shortcut** and choose **Tapback**.
11. Tap **Done**. That's it! Next time you tap to pay, listen. 🔊

Part 2 · Android

You need: **Google Wallet** set up for tap-to-pay, and the free app **MacroDroid**.

> **Good to know:** Android phones can't hear the tap itself. Tapback listens for Google Wallet's "you just paid" message instead, so the joke may come a little **after** you pay, not at the exact moment.

1. Open the **Play Store**, search for **MacroDroid** and tap **Install**.
2. Open MacroDroid. When it asks for **Notification access**, tap **Allow**, find **MacroDroid** in the list and switch it **on**.
3. Open **Google Wallet** → tap your **picture** (top right) → **Notifications** → make sure **Transactions** is **on**.
4. Charles will send you the Tapback macro, or set it up with you. It takes him about 3 minutes.
5. In MacroDroid, make sure the **Tapback** switch is **on** (green).
6. Pay for something small with your phone and listen. 🔊

If it doesn't talk: troubleshooting

Problem	Try this
iPhone: a box pops up asking "Run?"	Shortcuts → Automation → tap the automation → choose **Run Immediately**.
iPhone: you see a banner but hear nothing	Turn **Notify When Run** off (same screen as above). Then check the volume below.
No sound at all	Press the **volume-up** button on the side while nothing is playing. The shortcut also turns the volume up itself.
iPhone silent switch / Silent mode	If the little switch on the side shows **orange**, or Silent mode is on (iPhone 15 and later: Action button), spoken words may be muted. Flip it back to ring.
Android: silent or Do Not Disturb	Swipe down from the top of the screen and turn **Do Not Disturb** off. Turn the **media** volume up.
Android: nothing happens	Settings → Notifications → **Notification access** → MacroDroid **on**. In MacroDroid, check that the macro is **on**. Some phones need **Battery → Unrestricted** for MacroDroid.
It says the wrong store name	That's normal sometimes. The store's official name can look strange (like "SQ *JOE'S CAFE").
Jokes about paying with a plastic card?	It only works when you pay with your **phone**, not a physical card.
Want it to stop	iPhone: Shortcuts → Automation → swipe left on it → Delete. Android: switch the macro off in MacroDroid.

Tapback never sees your bank login. Everything stays on your phone. 💜
